

## Chapter 1.1.1 – General Definitions

### Current OIE proposed text:

#### Article 1.1.1.1.

##### ***Case***

means an individual animal [affected by an infectious or parasitic disease] infected by a pathogenic agent listed by the OIE.

### Suggested text:

##### ***Case***

means an individual animal [affected by an infectious or parasitic disease] infected by a pathogenic agent [listed by the OIE].

**Rationale:** The reporting of a case should not be limited to only OIE listed diseases. Reporting of disease events and cases would also include emerging disease situations, or pathogenic agents which a country may be controlling and not listed by the OIE, but nevertheless, of importance to that country.
